## EXAMINER'S AMENDMENT

### *Election/Restrictions*

1. Claim 1 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 5-7 and 14 are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim. In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### *Drawings*

2. The drawings were received on 22 August 2005. These drawings are acceptable.

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lawrence E. Ashery (Reg. No. 34,515) on 23 November 2005.

The application has been amended as follows:

- Cancel claims 15-24.

- In claim 7, replace "30 frames/sec, and n is 2." with --30 frames/sec.--

4. The following is an examiner's statement of reasons for allowance: The prior art does not teach or fairly suggest a CCD imaging apparatus in which a read pulse is generated at a first frame rate and a CCD drive pulse is generated at a second frame rate being  $n/2$  times the first frame rate where  $n$  is an integer greater than 2, further including a frame memory for storing a signal output from the CCD corresponding to one frame after each of the CCD read pulse and for reading out the stored signal  $n/2$  times to a camera signal processing circuit as claimed. While systems which store frames in a memory and read them out multiple times are known (see for example, Schmale et al. (WO 00/02382), Saito (JP 04-160878) and Takano (JP 11-220727)), the claimed combination is not.

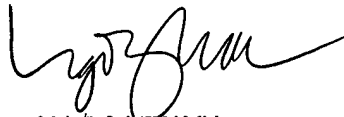

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy J. Henn whose telephone number is (571) 272-7310. The examiner can normally be reached on M-F 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ngoc Yen Vu can be reached on (571) 272-7320. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
